

# Linking to United Streaming in Kidspiration

You can create a link to a United Streaming video within Kidspiration using one of the following options:

1. First go into United Streaming and create an assignment. It can be as simple as: Watch the video on animals of the desert and write down two adaptations that allow them to survive in the extreme temperatures. When you finish creating the assignment, United Streaming will give you a URL for the assignment. Once you have the URL, go to Kidspiration and do the following:
  - a. Open Kidspiration
  - b. On the toolbar, select "teacher" and choose enable teacher tools
  - c. Next, highlight the text or photo that you want to hyperlink to the assignment and go to "teacher" > "URL Hyperlink" and paste the link you were given for your assignment in United Streaming.
  
2. For option two you will go to United Streaming and find on the video you want students to view. Click to play the clip. While it is playing, right click and choose properties. Be sure to select the FULL URL that is displayed for the clip. Often part is hidden until you scroll down. Then:
  - a. Open Kidspiration
  - b. On the toolbar, select "teacher" and choose enable teacher tools
  - c. Next, highlight the text or photo that you want to hyperlink to the video and go to "teacher" > "URL Hyperlink" and paste the link you found under properties.
  
3. Here is a [sample file](#). I linked the animals link as an assignment using option one and the plants using the URL address in properties using option two.
