

Now Enrolling for Math and Creative Problem Solving Classes

- **Is your child learning skills to solve math problems independently? Thinking for himself?**
- **Is your child prepared for Middle and High School?**
- **Is your child challenged enough in math?**

The Southern California Center for Academic Excellence (SCCAE) delivers an approach to learning that is innovative and inspiring. Help your child learn to love math! Help him/her experience less stress as they begin to approach college prep classes in math.

We use proven methods to teach basic math skills to students, encourage them to become individual thinkers to solve math problems and help them grow to meet their long term goals. The program is focused on building skills, thinking and self-esteem.

We offer courses in:

- ◆ **Basic Math Concepts (for second to fifth grade students): Coursework builds confidence and skills as your child learns basic math skills.**
- ◆ **Applied Math - Creative Problem Solving (for fourth to eighth grade students): A unique curriculum designed to teach your child how to apply math concepts in solving advanced math problems. Our approach stimulates his/her thinking process, unlocks brain power and inspires students to excel in math and problem solving.**

These programs are designed to serve both the needs of the under-performer and the under-challenged student. Send them to Southern California Center for Academic Excellence (SCCAE), a place where your child will learn math and problem solving skills to achieve success in life.

Next sessions begin March 29, 2010

To learn more about our program, please register for one of our **FREE** seminars as listed below or contact us:
